

RIGHT NOW

Physiological Sigh

1. Two short inhales through the nose
2. One long slow exhale through the mouth
3. Repeat twice

RELAXATION

Slow Down. Be Quiet.

WHY IT WORKS

Doubles CO2 clearance in one breath.

Activates the vagus nerve. Fastest known reset for acute stress.

TRADITION

Rediscovered by Huberman Lab. The body has always known it.

WHEN

Panic. Pre-meeting. Anywhere.

RIGHT NOW

Extended Exhale

1. Inhale for 4 counts
2. Exhale for 8 counts
3. Repeat for one minute

RELAXATION

Slow Down. Be Quiet.

WHY IT WORKS

A longer exhale than inhale shifts the nervous system from sympathetic to parasympathetic dominance.

TRADITION

Core to pranayama practice for thousands of years.

WHEN

Racing heart. Before sleep.
Mid-argument.

EVERY DAY

Resonance Breathing

1. Inhale for 5 counts
2. Exhale for 5 counts
3. 5 minutes each morning

RELAXATION

Slow Down. Be Quiet.

WHY IT WORKS

Breathing at roughly 6 breaths per minute maximizes heart rate variability, the body's resilience marker.

TRADITION

Formalized as HRV biofeedback training; the rhythm itself is ancient.

WHEN

Daily practice. Builds baseline calm over weeks.
